

**PRIVATE TREATY  
BULL SALE  
2026**

---

**LEARN FROM THE PAST**  
*Live in the Present*  
**LOOK TO THE FUTURE**

We are very proud of the depth of this year's bull pen. We have a strong selection that includes both heifer safe bulls and power cow bulls. In addition, we have some top end replacement heifers for sale. We cannot retain them all.

We run a herd of predominantly black Angus cattle with a few red Angus as well as a few Angus influenced commercial cows. Our long-term goal is to produce the best Angus cattle that meet our standards and type. We focus on efficiency in a package that includes good feet and udders. The cattle must be able to travel the grazing pastures and raise healthy calves that wean out at a good weight.

2025 saw us at a few less shows but we enjoyed a good run at the shows we went to. Melissa's red 2yr old - Red Honeybrook Antebellum, took second place at the Turtleford Summer Cattle show, in the 2 yr old British breed with bull calf at side class.

The bull pen is open for viewing. Just give us a call and come by for a visit. We can provide current ADG on any bulls on request. Give us a call for updates. This year the bulls are on TMR with corn silage, forage and a bull developer ration. We will be weighing the bulls monthly and updating the ADG data.

It is a pleasure working with the great people from Honeybrook Angus on their nutrition program. I hope you are able to make the sale to see this impressive group.

The cowherd utilizes a customized mineral program that is balanced throughout the year. The bull development program is built to maximize forage utilization and gut health. All forages are sampled and analyzed to ensure quality feed sources are used. Once the calves are weaned, they are slowly transitioned to a TMR. The TMR is forage based and is designed to promote lean muscle growth, allowing the bulls to express their genetic potential. The energy source used in the bull ration is a 16% protein pellet. Multiple protein sources are used that provide a blend of rumen degradable and rumen undegradable protein. A probiotic is included in the pellet to optimize rumen efficiency. Chromium is now utilized in the pellet as well, as Chromium is an essential micromineral that most feeds are deficient in, and it aids in glucose absorption and increases protein accretion. This allows bulls to better withstand effects of heat and cold stress. Rumen health is of utmost importance, which is why suitable protein sources and proper starch levels are fed to the bulls.

The overall nutritional health of both the bulls and cowherd is of major importance to Lee and Cathy. These bulls are developed with longevity in mind, as their ration remains at the same energy level throughout the whole winter developing phase. If you have any questions about the nutrition program, feel free to reach out.

*Good luck on sale day!*
